Discussion

During a meeting held last week, a question was raised about one of the seven proposed sampling locations on the southeast of Bldg. 774. The specific sampling location in question was CH48-022 that didn't appear to be associated with any pipe location. An enlargement of the map of that area and a discussion with Susan Serreze, specifically associated the sampling location number with a specific point on Pipe 27 on the southeast corner of Bldg. 774. The map enlargement did however, identify a sampling point that does not appear to be associated with any pipe run nor did it appear to have a sampling location number. With help from Susan Serreze, we identified the location number to be CG47-006. I presented this new information to David Kruchek and advised him that there are now eight sampling locations and that KH planned to have surveyors locate this last location even though it did not seem to be associated with any pipe run. I advised David that we would work with the utility locators and if there is indeed no pipe run and there hasn't been any historical record of any pipe run existing in that location, we would not take the sample. If, the utility locators provide information that there either is a pipe run below this location or there was a pipe run in that location in the past but since removed, we will proceed with taking the sample. David agreed and asked that I provide feedback to Harlen Ainscough or him with the results.
